Slide 1 – AI Fake Assistant

Artificial Intelligence and Digital Safety

Name: _____

Department: _____

College: _____

Slide 2 – Introduction

• AI assistants help users perform different tasks.

• Fake AI assistants are systems that pretend to be genuine AI tools.

• They may provide false information or misuse user data.

• They can create security and privacy problems.

Slide 3 – What is a Fake AI Assistant?

• A fake AI assistant is an application or chatbot designed to look like a real AI assistant.

• It may copy the name, logo, or appearance of a trusted AI service.

• Its purpose may be to mislead users.

• It can collect personal information without proper consent.

Slide 4 – How Does It Work?

• 1. User opens the fake assistant.

• 2. It asks for personal information.

• 3. User provides the requested details.

• 4. The information may be stored or misused.

• 5. The assistant may generate misleading responses.

Slide 5 – Common Examples

- Fake customer-support chatbots
- Fake AI websites and mobile apps
- AI assistants asking for passwords
- Fake job/recruitment assistants
- Impersonation chatbots on social media

Slide 6 – Risks

• Privacy loss

• Data theft

• Financial scams

• False information

• Identity misuse

• Malware or harmful links

Slide 7 – Warning Signs

• Unknown or suspicious website

• Requests for passwords or OTPs

• Unusual payment requests

• Too many unnecessary permissions

• Poor spelling or strange messages

• Promises that seem unrealistic

Slide 8 – How to Stay Safe

• Use official websites and apps.

• Never share OTPs or passwords.

• Check the website/app carefully.

• Keep devices and apps updated.

• Use strong passwords.

• Verify important information from trusted sources.

Slide 9 – Advantages of Genuine AI Assistants

- Help with learning and research
- Answer questions quickly
- Improve productivity
- Help with writing and coding
- Automate simple tasks
- Provide useful digital assistance

Slide 10 – Conclusion

• Fake AI assistants can create serious privacy and security risks.

• Users should verify AI tools before using them.

• Personal information should be protected.

• “Think before you trust an AI assistant.”

• Thank You
